SAFEGUARDING THE MOST VULNERABLE WITH A FRESH WHIFF OF AIR

HIV care and treatment are critical to the health of the nation and its people. While there are CST (Community Based HIV Testing) models present, the environment they work in is not helpful to the patients. Here's in operation since 2004 AHF India Cares, that has been serving the nation with free HIV Care, Support and Treatment services.

CHALLENGE

The clinic in Lajpat Nagar is frequented by patients who are at various stages of the disease. Most have low immunity and are infected with highly contagious diseases. Their attendants were prone to these diseases and would often fall sick. The challenge was to lower the chances of cross-infection.

SOLUTION

Sharp knew they had to bring down the overall infection in the air for the doctors and nurses to work at their full potential. Hence, the office was set up with a wall mounted air purifier, FUSS1KE in the waiting area, and 6 sets of Ducted Ion generators in doctor's cabins.

RESULT

Reduction in the number of pathogens, chances of cross infection reduced, the clinic was odour free, inner air was more healthier and hospitable.

As the Maintenance and Administration Manager of AHF cited –

“We bought this product after a lot of research. Sharp’s Plasmacluster Technology is the only one, which has 31 global certifications; esp. regarding the efficacy of Plasmacluster Technology against tuberculosis and H1N1. This made us opt for it. We are very satisfied and hope to install the same in all our offices”
