

## Largest Smart Phone manufacturing company resolves Print Security issues through Print Archiving and cost recovery software

### The Challenge

Largest contract manufacturing company produces smart phones and iPad. Customer has various departments R&D, production, logistics, compliance etc., In R&D documents are critical and confidential. There is no monitoring & controlling system to check who is printing what? And how the documents are shared within and outside network.

### Technology Solution from Sharp

Sharp has provided MX-M4050 MFP with Cost Recovery Software and Print Archival System to monitor the print jobs from each user. Any print job released by user, a copy of PDF will be stored in the server for IT Admin to check and review. In addition to that, Sharp has provided MX-M356NV (2nos) and DX-2500N (1no).

Relying on un-secured network based MFPs, Smart Phone manufacturing company faced issues with print security, print controlling & monitoring in the manufacturing premises. With the help of high quality Sharp A3 MFP combined with MyQ Cost Recovery Software and Print Archiving Facility.

### Industry

Manufacturing

### Challenges

- Secure Print
- Print Controlling & user wise monitoring
- Print Archival

### Solutions

Highest configuration of Sharp A3 MFP with cost recovery software and Print Archival System.

### Benefits

- Print Archival
- User wise Print Controlling & Monitoring
- Data Security

### Further Action

Customer is planning to replace 14 existing MFPs to Print Archival Solutions in 2 manufacturing locations.
