

SHARP RESCUED DENTAL CLINICS FACING CONCERNS WITH CROSS-INFECTION.

HI TECH DENTAL AND DENTAL AVENUE

Hi Tech Dental and Dental Avenue are the names of 2 premium dental clinics located in Ongole and Kolkata respectively. Equipped with all the modern facilities and tools, they provide their clients with the best possible care. With the onset of the Corona pandemic, they have taken measures to follow all the requisite Covid-19 Protocols.

CHALLENGE

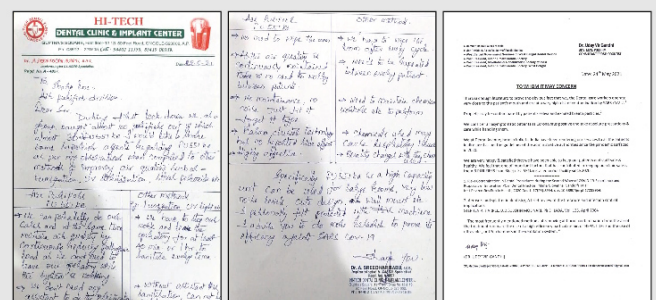

While the world was trying to adjust to the new normal and the clinics were slowly reopening, there was always the danger of an asymptomatic patient walking in. The risk was high as doctors were exposed to a great degree of pathogens while attending to patients. The fear of cross-infection was also high.

SOLUTION

We proposed a FU-551KE Commercial Air Purifier unit with a 3-way airflow bearing a high density of ionisation. Apart from that, a FP-J60 Air Purifier unit was placed in the reception areas of both clinics.

OUTCOME

Prior to that, work was periodically stopped for fumigation post every patient visit. This would eat away 45 minutes to 1 hour of work per visit. After mounting the Sharp Air Purifying Solution, not only the pathogen levels have dropped but the efficiency level has also gone up. The fear and concern that was in the air prior to it have now dissipated. Not even a single case of Covid-19 has been registered among the doctors and staff in both clinics.

Letters from Dr Shridhar of Hitech Dental and Dr Uday Vir Gandhi of Dental Avenue.
